

# MATHEMATICS (MATH)

---

**MATH 117. Basic Concepts of Mathematics. (3 Credits)**

This course deals with practical mathematical issues in church administration and accounting. Using a general approach to basic math concepts students learn to apply math principles in such areas as statistical evolution and budgeting.

**MATH 202. Introduction to Statistics. (3 Credits)**

"Students will become familiar with basic elements of statistical theory for professional practice. Topics will include graphing and summarizing data, probability, estimation, hypothesis testing and regression."
